

## PRESS RELEASE: 02 January 2009

Systems integration consultancy Rex has become one of the first organisations to be awarded the ISO 9001: 2008 quality assurance accreditation.

Rex has had its work processes accredited to the internationally recognised quality management system standard, ISO 9001: 2008. Rex is one of the first organisations in the UK to achieve this version of ISO 9001, which updates and replaces the 2000 version. Rex first achieved ISO 9001:2000 accreditation in 2006, and was ISO 9000 accredited prior to that.

David Morriss, Director of Rex commented: "We are delighted to again achieve accreditation, recognising our ongoing commitment to quality and to continuous improvement. We are proud to count ourselves among over 500,000 organisations around the world that have established ISO 9001 as the preferred quality assurance standard."

"The accreditation demonstrates that we are an efficient and agile organisation with a clear focus on customer satisfaction," he continued.

"It has been a great experience in terms of teamwork and we were all happy and relieved when we received the good news. The award covers our full range of services and we look forward to delight our clients even more in the future."

The award was made through Lloyd's Register Quality Assurance (LRQA), a world leader in assessing business processes and products against internationally recognised standards. LRQA emphasises that ISO 9001: 2008 focuses on processes and customer satisfaction rather than procedures and so is equally applicable to service providers, such as Rex, as well as to manufacturers.

### About Lloyd's Register

The Lloyd's Register Group is one of the world leaders in assessing business processes and products against internationally recognised standards.

LRQA is responsible for delivering management system certification services. It offers assessment against ISO 9001. It can provide support and guidance for those looking to start on the route to a certified management system. It offers gap analysis, preliminary assessments and a number of training courses to prepare customers for certification. Regular surveillance visits and certificate renewal visits every three years make sure that customers' quality management system (QMS) continues to meet the requirements of the standard.

### About Rex

Since its formation in 1983, Rex has established itself as a leading independent technology consultancy and systems integrator. The company was created to help customers realise the full potential of information technology.

The Rex team is made up of highly skilled industry practitioners who provide independent consulting, specifically designed to help customers meet their commercial objectives. Rex has earned an enviable reputation for providing first-class manufacturing systems and supply chain integration solutions to the global energy industry.
